STEP 09 | Reports, Dashboards & Success Metrics

Give managers actionable visibility and establish measurable outcomes.

---

1. Recommended reports

- Open Cases by Priority and Status.
- Cases by Owner and Queue.
- Cases approaching or breaching SLA.
- Cases waiting for first response.
- Reassignment count by category, queue, and agent.
- AI review-required cases and AI/Flow failures.
- Priority recommendation compared with final human-approved priority, where captured.

2. Recommended dashboard components

- Backlog by priority.
- SLA risk and breach trend.
- Median or average time to first response.
- Open workload by agent/queue.
- Reassignment rate and routing exceptions.
- AI review volume and override rate.
- CSAT trend if a reliable existing survey measure is available.

3. Metric definitions

- Time to first response: time between Case creation and first meaningful response.
- Triage latency: time between Case creation and priority/assignment decision.
- SLA compliance: percentage of eligible cases meeting response/resolution targets.
- Reassignment rate: share of cases reassigned after initial routing.
- Priority quality: agreement with reviewed priority, with false-low errors separately tracked.
- Workload distribution: open or weighted cases by agent/queue, adjusted for skill and availability where possible.

4. Baseline and targets

- Measure the current process before launch.
- Set target improvements with support leadership after baseline review.
- Use a pilot group to compare outcomes and avoid attributing every change to automation.
- Segment results by case type, priority, channel, and queue to identify hidden issues.

5. Review cadence

- Daily during pilot: failures, high-priority cases, and routing exceptions.
- Weekly during pilot: SLA trends, overrides, false-low errors, and agent feedback.

- Monthly after stabilization: business outcomes, policy changes, and quality trends.

Project note: This is a proposed implementation guide. Validate Salesforce features, licensing, configuration, security requirements, and business policies in the target organization before implementation.
